

Domaine Marcel Couturier

MAÇON

« AUX SCELLES »

Plot

This great white wine is made from Chardonnay grapes, located in the village of Vinzelles, in the Mâconnais region of southern Burgundy. This parcel has a deep clay soil with a 30cm layer of flint. The name "Au Corlier" comes from the locality.

The vines here are 70 years old. The vineyard soils are regularly tilled, about 5 times a year with different tillage tools, as the estate is in conversion to organic farming (Certification 2021). In the vineyards, treatments are natural (sulfur and copper) in low doses, combined with plant decoctions and purins to enhance the natural protective action.

Wine

These vines are around 15 years old.

The Domaine's vines are certified organic and biodynamic, and the soil is worked several times a year. The various varieties of plants that occur spontaneously are mowed. The vines are treated with natural products (sulfur and copper) in low doses, combined with plant decoctions and purins to enhance their natural protective action. Preparations 500P and 501 are applied throughout the vegetative phase of the vine.

We carry out severe manual disbudding to control yields and improve the formation of the Poussard pruned vines, as well as picking between the vines. We use a number of methods to protect the grapes as they develop, such as braiding the vines in warm years, to keep them in the shade, and rigorous cutting in rainy years.

Biodynamic compost, made on the estate from grape marc and horse and cattle manure, is added to the green manure planted between the rows. This method provides a significant supply of naturally-occurring nitrogen and humic matter, thanks to the mix of plant varieties (clover, field pea, radish, faba bean, rye).

Winemaking

During the harvest, the grapes are picked when fully ripe and entirely hand-picked. The grapes are pneumatically pressed in whole bunches, followed by static settling in 2 stages before being put into must. Fermentation takes place in oak barrels, sourced from French forests, and often ends in the spring of the following year.

Bottling often takes place in August, after a minimum of 11 months' ageing.

The doses of sulfur used comply with DEMETER specifications (>90) and are often between 60 and 80 of total SO₂.

Tasting Notes

Robe: Pale gold.

Nose: This wine is reminiscent of spring, with its sweet scents of lime blossom and chamomile, and its charming aromas of ripe, fresh yellow fruit.

Palate: pure gourmandise; full-bodied and fleshy, underlined by a fine vivacity, a wine full of juicy, fresh fruit".
